MOUNTING BRACKETS

AVAILABLE MOUNTING BRACKETS & METHODS

Point Lighting Corporation offers optional brackets and junction boxes for a variety of installation methods. These options are designed to make the installation faster and easier for the installer. Brackets are typically black anodized aluminum with stainless steel hardware included.*

Junction boxes include terminal blocks and one cable gland for use with the fixture cable loop. The standard box has two feed-thru hubs that may be used with conduit or cable by others. One blank plug is included. PJB junction boxes have the highly corrosion resistant Point Lighting Marine Treatment in either yellow or green (option -MT for offshore marine use). All mounting hardware supplied is 316 (A4) stainless steel.
